

Portfolio Handover Documentation

Website: <https://drwaeldk.com>

Dashboard: <https://drwaeldk.com/dashboard>

Prepared for: Dr. Wael A. Al-Dakroury

This guide explains how to use and update the website from the dashboard, how to keep the design looking clean, and where everything is hosted and managed.

Table of contents

1. [Section 1 — How to use the website & dashboard](#)
 2. [Section 2 — Keeping the website looking presentable](#)
 3. [Section 3 — Website information \(host, domain, storage, accounts\)](#)
-

Section 1 — How to use the website & dashboard

1.1 Website pages (what visitors see)

Page	URL	What it shows
Home	/	Hero banner, profile & credentials wheel, affiliations, Why Trust, services preview, promo video, field activity preview, testimonials, contact
About Me	/about-me	Full profile, certificates, career timeline, leadership/service, publications
Services	/services	Therapy service cards, clinical expertise cases, testimonials
Gallery	/gallery	Featured videos, video library, promo banner, photo/video gallery
In the Field	/in-the-field	Interactive globe, events timeline, memberships, closing CTA band
Contact	/contact	Location, hours, email/phone, appointment form

The top menu links to these pages. The floating contact button and footer also lead visitors to Contact.

1.2 Opening the dashboard

1. Go to <https://drwaeldk.com/dashboard>
2. Sign in with your **dashboard admin email and password** (the Supabase admin account linked to this project).
3. After login you see the **Content Manager** sidebar on the left and the editor for the selected section on the right.
4. Use **View live site** (bottom of the sidebar) or each panel's **Preview live page** → link to check the public site after saving.
5. Click **Log out** in the top-right when you are finished.

Important: Changes only appear on the live website after you press the relevant **Save** button (for example *Save changes*, *Save header*, *Save profile*, *Save service*). Editing a field without saving will not update the site.

1.3 Dashboard overview

The left sidebar has six main sections. Each one matches a part of the website:

Dashboard section	Controls content on...
Home	Home page top areas (hero, credentials wheel, affiliations, Why Trust)
About Me	About Me page + home profile text/photo
Services	Services page + home services preview, clinical cases preview, testimonials
Gallery	Gallery page + home promo video banner
In the Field	In the Field page + home activity cards
Contact	Contact section (also used on the home page contact area)

Inside each section, blocks are listed in roughly the **same order** as they appear on the live page.

1.4 Home (Dashboard → Home)

Live page: /

Hero section

- **Where it appears:** Very top of the home page (full-width banner).
- **What you can edit:**
 - Desktop background image
 - Mobile background image (phones / small screens)
 - Professional title, name, description

- Primary and secondary button labels
- **Tip:** Use a wide landscape photo for desktop. Mobile can use a tighter crop if needed.

Credentials wheel

- **Where it appears:** Inside the profile area on the home page (interactive ring / compass).
- **What you can edit:** Tagline, and each ring point (short ring label, center title, detail text).
- Add, edit, or delete points with **Add point** / **Edit** / **Delete**.

Affiliations

- **Where it appears:** Below the profile bio on the home page (organization logos).
- **What you can edit:** Section title, subtitle, “view all” label, and each affiliation (name, role, logos).
- Logo options include fit (contain/cover) and optional badge logo layouts.

Why Trust

- **Where it appears:** Home page “Why Trust” block with side image and paragraphs.
- **What you can edit:** Eyebrow label, title, side image, paragraphs.

Other home sections (services preview, promo video, field events, testimonials, contact) are edited from **Services**, **Gallery**, **In the Field**, and **Contact** respectively — see below.

1.5 About Me (Dashboard → About Me)

Live page: `/about-me` (profile text/photo also feed the home profile)

About Dr. Wael (profile)

- **Name, tagline, title**
- **Credentials** list
- **Homepage bio** — short paragraphs on the **home** profile only
- **About page bio** — full paragraphs on **About Me**
- **Profile photo**
- **Career impact stat cards** (four number cards under the bio on About Me)

Save with **Save profile** and **Save stat cards**.

Certificates & training archive

- **Where it appears:** About Me → Certificates gallery.
- Edit section label/title, then manage certificate cards.
- Each certificate: title, year, issuer, description, and **certificate image**.

- **Featured slots 1–9:** checkboxes choose which certificates appear first on About Me (and on page 1 in the dashboard list). If none are selected, the nine most recently added are used.

Feature: Edit certificate photo (simple guide)

Certificate photos often come from a phone (desk, wall, uneven lighting). The site includes an **Edit certificate photo** tool so every certificate looks clean in the same **landscape (4:3)** card.

How to upload and edit:

1. Open a certificate → **Certificate image**.
2. Drop or choose a photo (JPG, PNG, WebP, etc., max about **12 MB**).
 - **HEIC/HEIF** (common iPhone format) is **not** supported — convert to JPG or PNG first.
3. The **Edit certificate photo** window opens automatically.
4. In that window you can:
 - **Drag** the photo inside the orange frame and use **Zoom** (See more ↔ Closer).
 - Choose an **Improve style**, then press **Improve photo**:

Style	What it does
Center only	Frame & center — keeps exact original colors (Strength not used)
Fix light	Gentle exposure — keeps natural color
Clear details	Sharper seals & text — no color shift
Balanced	Light + clarity — recommended
Vivid	Richer color for dull phone photos

- Set **Strength**: Subtle / Normal / Strong (except with Center only).
 - Choose **Background**:
 - **White** or **Black** — clean studio look
 - **Keep photo** — matches the photo's own background so the card fills seamlessly
 - Optional: turn on **Clear background** only if you want a cutout studio look (off by default). The first time you use it, the AI model may need to download.
5. Press **Improve photo** to apply the style, adjust drag/zoom if needed, then press **Save** to upload.
 6. You can also crop and **Save** without improving if the photo already looks good.
 7. **Cancel** closes without uploading.

After a photo is saved:

- **Replace** — upload a new original photo (opens the editor again).
- **Edit photo** — re-open the editor on the last saved card image so you can improve/crop again. Settings from the last save are restored when possible.
- **Remove** — clears both the remastered card image and the original.

The original upload is kept so you can re-edit later. After the image looks right, press **Save** on the certificate form so the live About Me page keeps it.

Career timeline

- **Where it appears:** About Me timeline.
- Edit section header (label, title, intro) and timeline entries (year, type, title, organization, etc.).

International leadership & professional service

- **Where it appears:** About Me leadership / academic service tabs.
- Edit section header, categories (tabs), and entries inside each category (title, org, period, description, optional links, journals, workshops).

Refereed publications

- **Where it appears:** About Me publications list.
 - Edit section header and papers (year, type, title, venue, etc.).
-

1.6 Services (Dashboard → Services)

Live pages: `/services` and related blocks on `/`

This panel is one of the most important content areas.

Services section header

- **Where it appears:** Heading under the Services page hero (the large top hero title itself is fixed).
- Fields: section title, tagline, intro.

Service pathway cards (therapy services)

- **Where they appear:**
 - Full detail cards on **Services** (`/services`)
 - Preview cards on the **Home** services section
- **What you can edit per service:**
 - Title, subtitle
 - **Summary** — shown on the **homepage** preview only (not on the Services page)
 - **Cover image** — one shared original, framed separately for two places (see below)
 - Detail paragraphs and optional bullet points (Services page)

Feature: Service cover images (upload once, frame twice)

Each service uses **one original photo**, then two separate framed versions:

Card	Ratio	Where it appears
Services page card	5:4	Detail cards on <code>/services</code>

Card	Ratio	Where it appears
Homepage service card	1:1 (square)	Side image in the homepage services section

How to use it:

1. Open a service → **Cover image**.
2. **Upload once** (drop or choose a photo). Same rules as certificates: JPG/PNG/WebP, max ~12 MB, no HEIC.
3. The editor opens first for the **Services page** frame (5:4). Use the same tools as certificates:
 - Drag + Zoom
 - Improve style + Strength
 - Background (White / Black / Keep photo)
 - Optional Clear background
 - **Improve photo** → adjust → **Save**
4. After that, you see two previews side by side:
 - **Services page card (5:4)** — **Edit photo / Clear frame**
 - **Homepage service card (1:1)** — **Edit photo / Clear frame**
5. Click **Edit photo** on the homepage card to frame the **same original** for the square home layout (Improve fills the card edge-to-edge so there are no empty bars).
6. **Replace original** uploads a new shared photo (you will need to frame each card again).
7. **Remove all** clears the original and both framed images.
8. Press **Save service** on the form so the live site keeps everything.

Simple tip: Upload a photo with room around the subject, frame the 5:4 card for Services, then frame the 1:1 card for Home — same photo, two clean crops.

Clinical Expertise section

- **Where it appears:** Cases / clinical specializations on Services; a selection also feeds the home services area.
- Edit section title/intro.
- Each case can include: title, abbreviation, category, filter group (Neurodevelopmental, Learning, Developmental, Communication), excerpts (Services + homepage), cover image, detail paragraphs, therapy areas.
- **Featured slots:** choose which cases appear first (up to 10 featured slots). Unchecked cases still exist in the full list.

Testimonials

- **Where they appear:** Services page and home testimonials showcase.
 - Edit section header (eyebrow, title, description) and each testimonial (quote, name, details, etc.).
-

1.7 Gallery (Dashboard → Gallery)

Live page: `/gallery` (promo video also on home)

Watch section (two featured videos)

- **Where it appears:** Directly under the Gallery page hero.
- First video: text left / video right
- Second video: video left / text right
- Per video: YouTube ID or URL, title, poster image, paragraphs.

Video library

- **Where it appears:** “Key moments” cards under the Watch section.
- Edit label, title, description, and each moment video.
- Featured slot checkboxes control which items appear first / on homepage-related selections where applicable.

Promo video section

- **Where it appears:**
 - Gallery page (featured video banner)
 - Home page (after the services preview)
- Edit: background video file, eyebrow, headline, description, primary/secondary button labels.

Photo & video gallery

- **Where it appears:** Bottom of the Gallery page.
 - Edit header text and gallery items (images/videos, captions, featured order).
-

1.8 In the Field (Dashboard → In the Field)

Live page: `/in-the-field` (selected events also on home)

Earth globe

- Header text (label, title, description).
- **Globe countries:** add countries/locations that appear as points on the interactive map.

Dr. Wael's month & year (events)

- Section header + event cards (upcoming shown distinctly).
- Each event has media, dates, titles, descriptions, etc.
- **Homepage slots (Left / Middle / Right):** choose the three events on the home page. If none are selected, the three most recently added events appear.

- Separate In-the-Field featured slots control prioritization on the full page.

Professional membership

- Section header + organization cards (logos, names, roles).

Academic & Clinical Presence (closing band)

- Bottom call-to-action on In the Field (label, title, description, button labels).
-

1.9 Contact (Dashboard → Contact)

Live pages: `/contact` and the contact block on home

Section header

- Label, title, intro above the contact layout.

Location card

- Practice name, department, city.

Office hours

- Hours for each day; optional weekend flag.

Email & phone

- Direct contact details shown beside the location card.

The appointment form on the contact page sends messages to the connected inbox (info@drwaeldk.com via the form service). You do not edit the form fields themselves from the dashboard—only the surrounding contact information.

1.10 Quick “where do I edit this?” map

I want to change...	Open dashboard section	Appears on
Home banner photo / name / CTAs	Home → Hero	Home
Credentials ring points	Home → Credentials wheel	Home
Affiliation logos	Home → Affiliations	Home
Why Trust text/image	Home → Why Trust	Home

I want to change...	Open dashboard section	Appears on
Profile photo / bio	About Me → About Dr. Wael	Home + About Me
Certificates	About Me → Certificates	About Me
Timeline / leadership / papers	About Me	About Me
Therapy services & dual frames	Services → Service pathway cards	Home + Services
Clinical cases	Services → Clinical Expertise	Services (+ home preview)
Testimonials	Services → Testimonials	Home + Services
Featured YouTube blocks	Gallery → Watch	Gallery
Promo video banner	Gallery → Promo video	Home + Gallery
Photo gallery items	Gallery → Photo & video gallery	Gallery
Globe / events / memberships	In the Field	In the Field (+ home events)
Address, hours, email, phone	Contact	Home + Contact

Section 2 — Keeping the website looking presentable

These habits keep the site looking professional after every update.

2.1 Match photos to the frame shape

Different places on the site use different frames. Always choose (or crop) photos that fit the shape:

Frame type	Shape	Common uses
Horizontal / landscape	Wider than tall	Home hero (desktop), certificate cards (4:3), services page service cards (5:4), many gallery / case covers
Square	Equal sides	Homepage service side image (1:1), logos, some membership / affiliation marks
Vertical / portrait	Taller than wide	Some profile or phone layouts

Do:

- Prefer landscape for wide banners, certificates, and Services page cards.
- Prefer **square** crops for homepage service images.
- Use the built-in **Edit photo / Improve photo** tools whenever the dashboard offers them.

Don't:

- Upload a tightly cropped face into a wide banner (empty stretched sides or awkward cuts).
- Force a tall poster into a wide or square frame without editing first.
- Upload HEIC iPhone photos without converting to JPG/PNG.

2.2 Shoot photos with room to edit

When you take a photo that will go on the website:

1. Stand back a little — capture a **wide scope**, not only the object filling the whole lens.
2. Leave space around certificates, people, and logos so you can crop later.
3. Keep the subject centered-ish, with light as even as possible.
4. Avoid extreme tilt; straighten later if needed, but start fairly level.

Close-up shots leave almost no crop room. Wider shots let the Edit photo tool fix framing cleanly for 4:3, 5:4, or 1:1 cards.

2.3 Keep text length suitable for each section

Every text box sits inside a designed layout. Too much text can overflow, wrap badly, or make the page look crowded.

Guidelines:

- **Hero description:** a short paragraph (a few lines), not an essay.
- **Section intros:** 2–4 short sentences is usually enough.
- **Card summaries / excerpts:** 1–3 short sentences.
- **Button labels:** a few words ("Book a consultation", "View services").
- **Credentials wheel ring labels:** very short phrases.
- **Certificate descriptions:** keep readable; visitors also see title, issuer, and year.

After saving, open **Preview live page** on phone and desktop. If a block looks cramped, shorten the text rather than fighting the layout.

2.4 Images quality checklist

- Prefer clear, sharp photos (not blurry phone shots).
- Avoid heavy filters that clash with the site's calm clinical look.
- Logos: use transparent PNG when possible; keep them readable on light backgrounds.
- Videos: use decent resolution; large files use more storage (see Section 3).
- For certificates and services, use **Improve photo** (Balanced is a good default) when phone lighting looks dull.
- Replace temporary / personal background clutter when needed (optional **Clear background**, or White/Black studio backgrounds).

2.5 Consistency habits

- Keep naming style consistent (same capitalization for titles).
- Prefer similar photo style within one section (e.g. certificates with a clean, consistent look).
- When adding many items (certificates, events, cases), fill **featured slots** intentionally so the first screen shows your best items.
- Delete outdated drafts instead of leaving empty or placeholder cards.
- After big edits, hard-refresh the live page (or open in a private window) so you are not looking at an old cached image.

2.6 Before / after save routine

1. Edit in the dashboard.
2. For photos: finish **Edit photo** → **Save** in the photo window, then press the section's **Save** button (certificate / service / etc.).
3. Wait for the success message.
4. Click **Preview live page** →.
5. Check desktop and mobile widths.
6. Adjust crop or shorten text if anything looks off.

Section 3 — Website information (host, domain, storage, accounts)

3.1 Project architecture (simple)

This portfolio **does not use a custom backend server**.

- The public site is a front-end application.
- All editable content and uploaded media are stored in **Supabase** (database + file storage).
- The dashboard reads and writes that Supabase data after you sign in.
- Hosting of the website files is on **Vercel**.

So: **Vercel shows the website** · **Supabase stores the content**.

3.2 Domain name

Item	Detail
Domain	drwae1dk.com
Registrar	Namecheap

Item	Detail
Billing	Domain is paid annually
Current term	Purchased for 2 years — must be renewed after those 2 years so the website address stays active

Namecheap account (domain management)

- **Username:** waelslp
- **Password:** YousifWael26
- **Login:** <https://www.namecheap.com/myaccount/login/>

Use Namecheap to renew the domain, manage DNS pointing to the host, and review domain email/DNS settings if needed.

Keep this password private. Change it if it has been shared beyond trusted people, and store the new password somewhere safe.

3.3 Website hosting (Vercel)

Item	Detail
Host	Vercel
Current plan	Free host on our end (shared host)
What that means	The live site runs on the free/shared hosting setup managed for this project

If you need a higher hosting plan later:

- Upgrading to a **Vercel Pro** (paid) host is possible when traffic or features require it.
- That upgrade should be **requested from us** (the development team) so deployment and billing are handled correctly.

If you want your own dedicated hosting account:

- You may purchase and use your own host at any time.
- Ask us to help reconnect the domain and deployment so nothing breaks during the move.

3.4 Supabase (content & media storage)

Item	Detail
Role	Stores all dashboard content and uploaded images/videos

Item	Detail
Current plan	Supabase Free plan
Access	Project is tied to Dr. Wael's Google account — sign in to Supabase with Google to open the project console

On the free plan, storage space is limited. When storage is nearly full you will need to either:

1. **Delete unused media/content**, or
2. **Upgrade to Supabase Pro** (paid monthly)

Until storage is freed or upgraded, new uploads may fail.

Dashboard login uses the admin email/password configured in Supabase for publishing. The **Supabase project itself** (tables, storage bucket, users) is accessed by signing into Supabase with the Google account that owns the project.

3.5 Professional email

Item	Detail
Address	info@drwael.dk
Provider	Zoho Mail
Use	Website contact identity; form submissions are connected to this address

Log in to Zoho Mail with the account created for this mailbox to read and send mail as info@drwael.dk .

3.6 Cost summary (at a glance)

Service	Plan now	Billing
Domain (drwael.dk)	Active (2-year purchase)	Renew annually via Namecheap after the prepaid period
Website host (Vercel)	Free / shared (on our end)	Pro upgrade only if requested / purchased later
Supabase	Free	Upgrade to Pro monthly if storage/limits are exceeded
Zoho Mail	Connected for info@drwael.dk	Per Zoho's plan for that mailbox

3.7 Who to contact for technical upgrades

For hosting upgrades, moving to a private Vercel account, Supabase Pro migration, or deployment issues, contact the development team that delivered this portfolio. Domain renewal and mailbox day-to-day use can be handled directly in Namecheap and Zoho with the accounts above.

Quick start checklist

1. Open <https://drwaeldk.com/dashboard> and sign in.
 2. Choose the sidebar section that matches the page you want to update.
 3. Edit text/images → press **Save** (and **Save service** / certificate **Save** after photo edits).
 4. Use **Preview live page** → and check mobile + desktop.
 5. For certificates: upload → **Improve photo** (optional) → crop/zoom → **Save** → save the certificate.
Use **Edit photo** anytime to re-adjust.
 6. For services: **upload once** → frame **5:4** for Services → frame **1:1** for Home → **Save service**.
 7. Keep photos wide enough to crop, and keep text short enough for the layout.
 8. Watch Supabase storage on the free plan; renew the domain before the 2-year term ends.
-

End of Portfolio Handover Documentation
